

ONDEMAND PENETRATION TESTING

powering Clone Guard® Security Scanning

Perform real world attack simulations on your infrastructure to identify existing vulnerabilities and obtain recommendations on how to improve your overall security with Clone Systems' **OnDemand Penetration Testing**

Proactively assess your network for vulnerabilities and identify corrective actions

- ✓ **OnDemand web-based portal** to conduct self-managed penetration testing
- ✓ **7-day access for unlimited scanning of up to 255 IPs** on your network to assess vulnerabilities for security and compliance*
- ✓ **Perform internal and external penetration testing** customized to meet your business requirements

Improve your overall security posture and your policies and procedures by understanding the vulnerabilities within your network and how to remediate them

- ✓ **Identify and exploit vulnerabilities** by simulating real-world attacks to assess the security posture of your network
- ✓ **Detailed vulnerability report** including high, medium, and low vulnerabilities found and exploited with remediation guidance

Meets compliance requirements validated by Clone Systems security expertise

- ✓ **Certified pass report** after assessing that there are no high or medium vulnerabilities in your environment

* Additional weeks are available to scan your network for a reduced fee
